

April 15, 2016

This letter is to inform you that all National Safety Council texts used to teach First Aid and cardiopulmonary resuscitation (CPR) meet the 2015 American Heart Association Guidelines for Cardiopulmonary Resuscitation and Emergency Cardiovascular Care.

The National Safety Council not only reflects the Guidelines in our texts, but we also had a hand in the development of these Guidelines. The National Safety Council was an integral part of the International First Aid Science Advisory Board in 2005, 2010 and 2015. This group reviewed and evaluated science as part of a 5-year evidence evaluation process. Evidence evaluation worksheets were included in the International Consensus on Cardiopulmonary Resuscitation (CPR) and Emergency Cardiac Care (ECC) Science with Treatment Recommendations. These documents formed the foundation for not only the AHA Guidelines, but also for the guidelines developed by resuscitation councils worldwide.

The National Safety Council is a nationally recognized first aid course provider and has been recognized as such in the OSHA Best Practices Guide: Fundamentals of a Workplace First-Aid Program.

The current CPR course for adults, infants and children is 2.5 instructional hours, 100 minutes of which is instruction and simultaneous practice with manikins. The CPR course for adults is 2.2 instructional hours. Additionally, all CPR courses include skills practice and testing in conducting an initial assessment, placing someone in the recovery position, proper removal of medical exam gloves and choking care for responsive victims. The current First Aid course is 3.7 hours and 30 minutes of instruction and includes skills practice and testing in how to stop bleeding, applying a pressure bandage, positioning for shock, spinal motion restriction, and applying an arm sling.

I hope this information is helpful. If you have additional questions about our courses and products, please feel free to contact me directly.

Yours truly,

Donna M. Siegfried
Senior Director
First Aid Programs
